## Remote Programming Instructions for the Autoland Scientech IScan 3 using SOD

1. **Ensure you have the latest updates for your IScan 3 device.** This includes software updates, and the latest application updates.
2. **Hookup your voltage stable battery maintainer.** Set the voltage to 13.5 – 13.9 for Domestic and Asian manufactured vehicles, or 14.4 – 14.7 for European vehicles. We will specify if there are any changes to this specification based on your application.
3. **Connect your IScan 3 to your router with an ethernet cable.** You will need to turn off the Wifi on the IScan device, then hook up the ethernet cable to the IScan and the router in your shop.
4. **Open up the SOD function from the main screen and select the SOD – OEM option,** then select the manufacturer you are needing.

We will call and provide any other specific instructions based on your application and needs, **please have the User ID and password** on hand so we can assist you as quick as possible. Thank You!
